

UBILITY ONE

The ultra-light next-generation seating system for bus and rail transportation.

Move smarter. With UBILITY ONE.

Can a seating system actually relieve passenger stress? Can a seating system help slow climate change? And reduce fuel costs too? While being flexibly usable to meet differing passenger needs? One can. UBILITY ONE by GRAMMER. The pioneering interior system for bus and rail transportation: systematically designed to meet today's – and tomorrow's – heightened mobility needs. Helping fleet operators optimally deal with passenger transportation challenges.

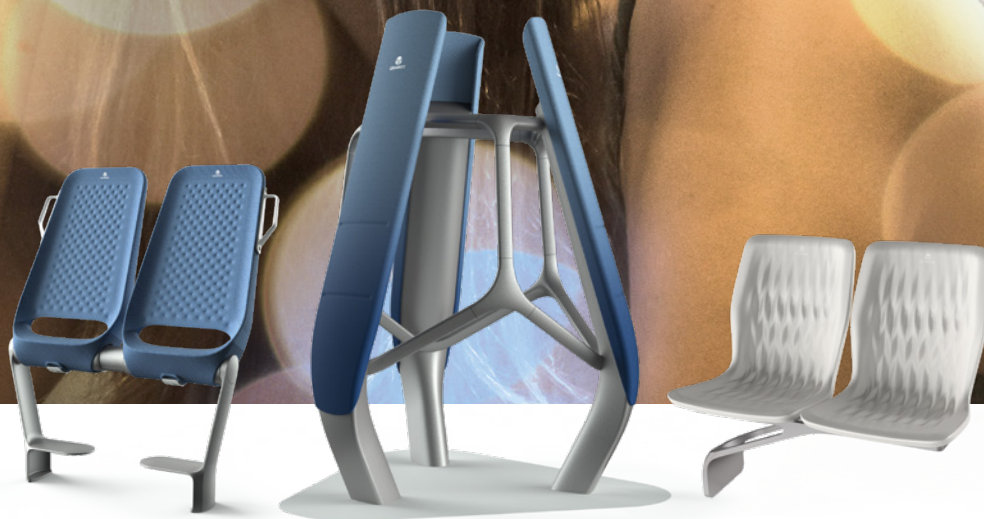

Sustainability meets economy

UBILITY ONE unites sustainability with economy, weighing up to 60 percent less than conventional seating, requiring less fuel, which lowers cost. That can reduce carbon dioxide emissions by 129,000 tons annually in Europe alone. The system employs recycled, recyclable and mono-materials that conserve resources and go easy on the environment.

More comfort and privacy – greater capacity and flexibility

With UBILITY ONE, people come first. This innovative system allows for varying vehicle interior arrangements tailored to meet the functional needs of different passengers. UBILITY ONE fulfills personal space needs while simultaneously increasing vehicle capacity and usage flexibility. The optimized interior is more spacious, affording better passenger flow.

UBILITY LIGHT

Ultra-light. Ultra-flexible.
Ultra-comfortable.

UBILITY LIGHT is the smart, ultra-light, ultra-flexible seating system for local and regional passenger transportation. The system has no fixed directional orientation, allowing very rapid yet compact arrangement and installation. UBILITY LIGHT utilizes flexible materials that afford highly ergonomic seating for individuals of widely differing stature. Excellent relative comfort is thus achieved despite minimalistic materials usage.

Benefits at a glance

- Intelligent design involving only five elements
- 60 % less weight
- Ultra-light: Double seat including seat frame and base weighs only 14.6 kg
- Flexible high-tech fabric for ergonomic seating
- Rapid installation in variable configurations
- Movement range and personal space preserved, even at greater seat density
- "Circular-ready" – the first-ever recyclable seating system

Extremely slim, and flexible:

Seat travel direction easily changeable.

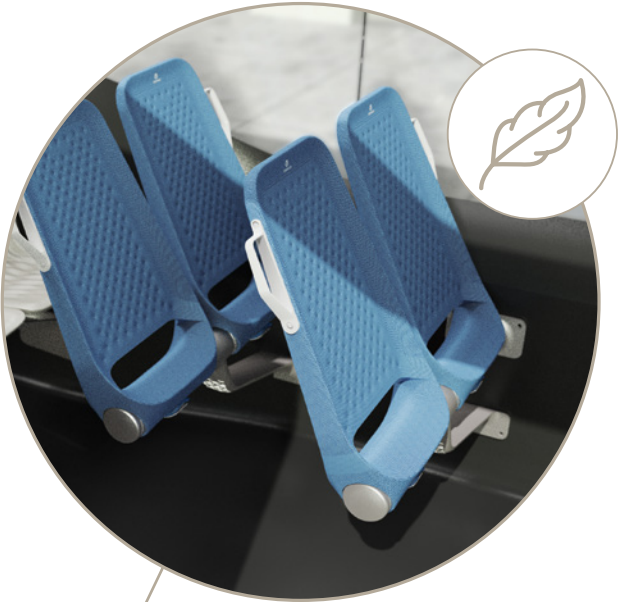

Instead of fifty parts just five:

More robust, intelligent design that reduces maintenance.

See product video for more information:
grammer.com/ubility

**60 % lighter than
conventional seating:**
Lower weight means
fuel savings.

Intelligent, dynamic high-tech weave:
For excellent ergonomics with an attractive look.

Rapid installation in variable configurations:
Allows very rapid yet compact arrangement
and installation.

UBILITY AIR

Reduce weight.

Without sacrificing seating comfort.

UBILITY AIR is attractive lightweight seating with a unique look and feel that affords great seating comfort for your passengers. These ergonomically optimized dual-shell seats feature a contoured surface structure that eliminates the complications and expense of upholstery. UBILITY AIR seats are exemplary in terms of sustainability too, being made of a fully recyclable mono-material ready-made for circular economy.

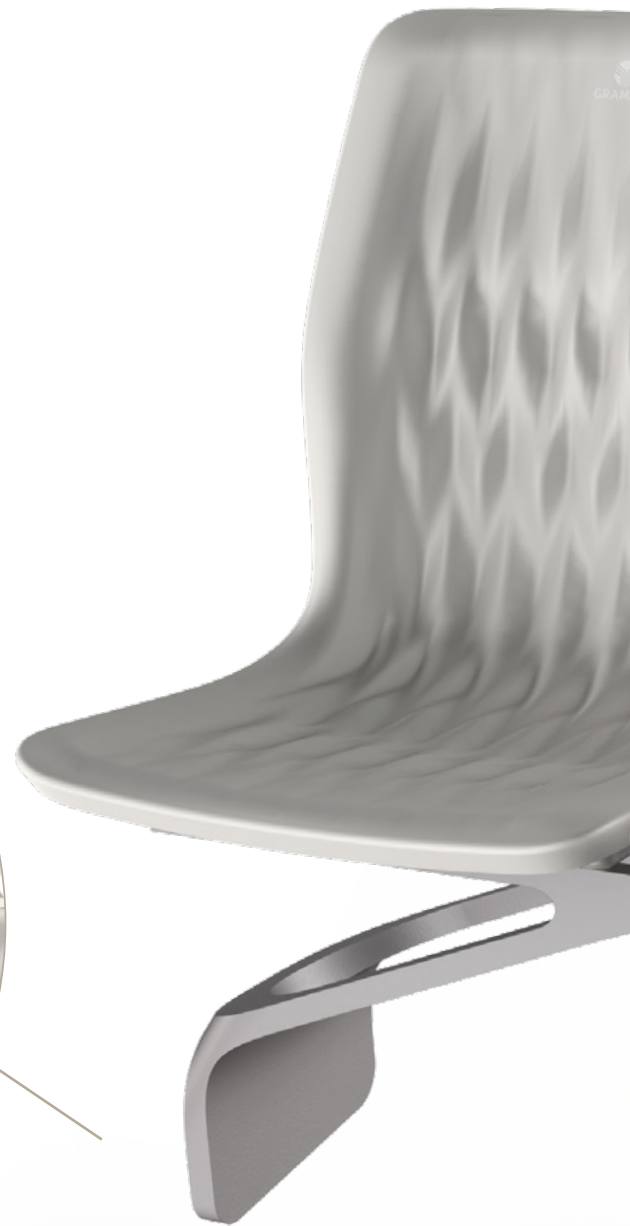

Benefits at a glance

- Minimal weight – a mere 4 kg
- Sustainable design: 100 % recyclable
- High-comfort unupholstered seating

Attractive in shape and color:

Comfortably structured seats look modern and urban, available in a range of colors.

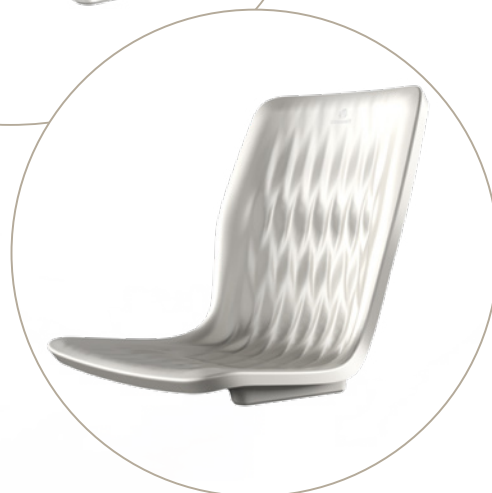

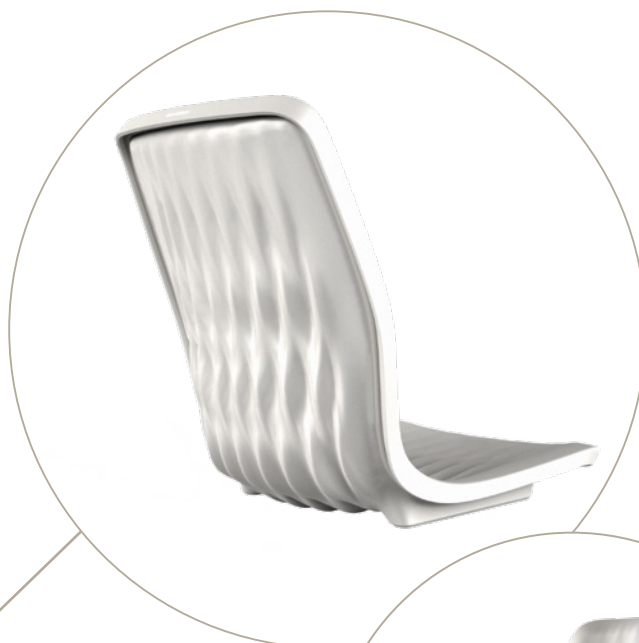

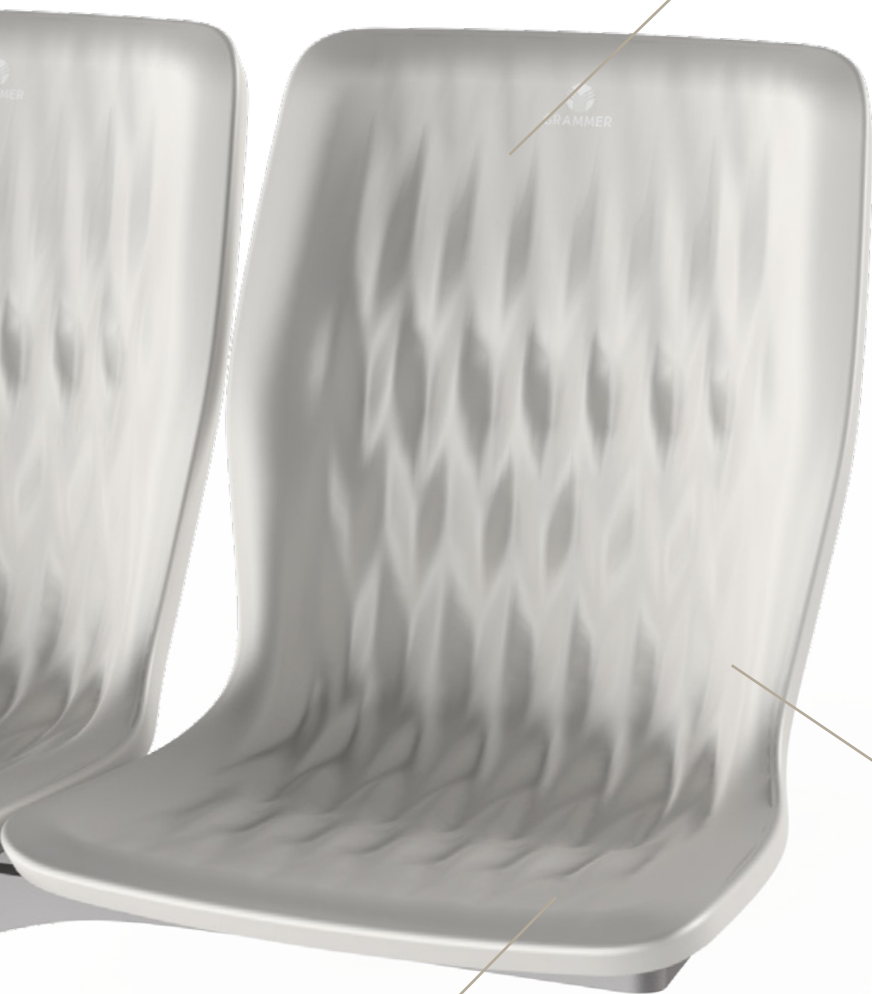

See product video for more information:
grammer.com/ubility

Robust:

Nifty design affording very good seating comfort, yet stable and indestructible for day-to-day transportation.

Chic exterior but green inside:

The seats are made from recycled materials and are 100 % recyclable in turn.

Ingenious lightweight build:

At a mere 4 kg total weight, the seats make possible significant fuel and CO₂ reduction.

UBILITY SHIFT

For leaning. For sitting.
For lower CO₂.

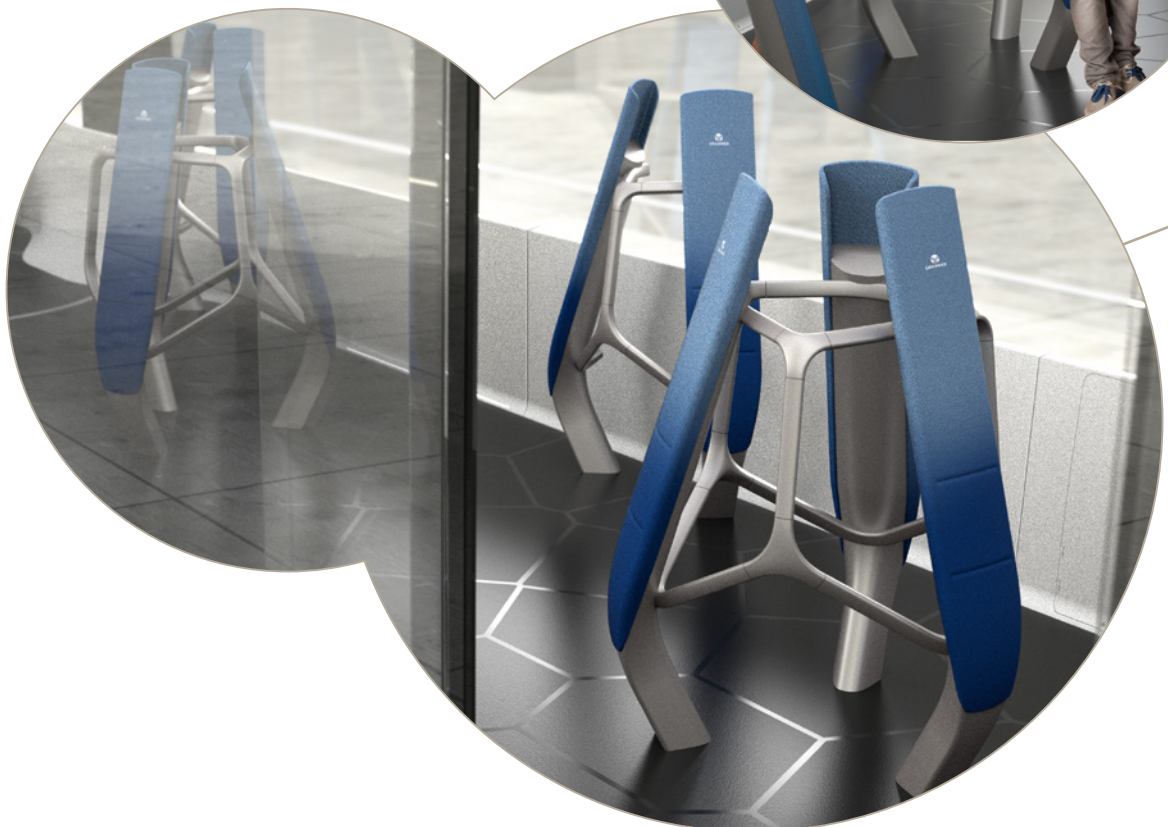

UBILITY SHIFT is an all-new standing and sitting support made by GRAMMER for enhanced passenger comfort on local transportation. These leaning/sitting islands are designed based on evolutionary psychology to meet the needs of people in public places. UBILITY SHIFT is a modular system individually configurable for specific requirements. Situated in the standing and multi-purpose areas of your vehicles, this innovative solution is flexibly structurable to best accommodate passenger volume.

Benefits at a glance

- Flexibly usable as handrail, leaning surface and/or minimalistic seat
- Innovative seat mechanism
- Comfort and safety for three people, installation takes up only 1 sqm
- Adaptable for different vehicle areas thanks to modular structure

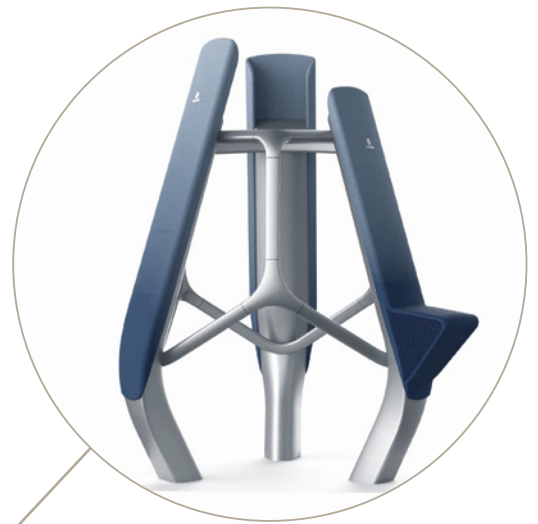

Flexible comfort:

Intelligent multi-use module design for holding, leaning and sitting.

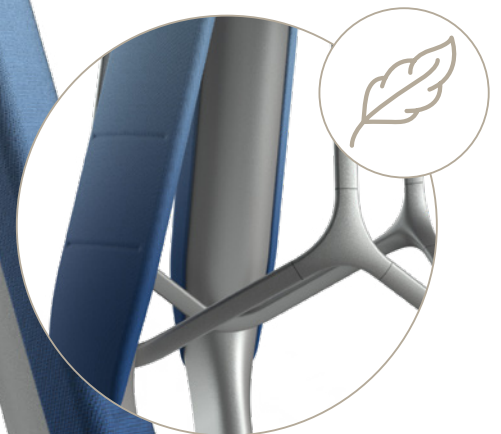

See product video for more information:
grammer.com/ubility

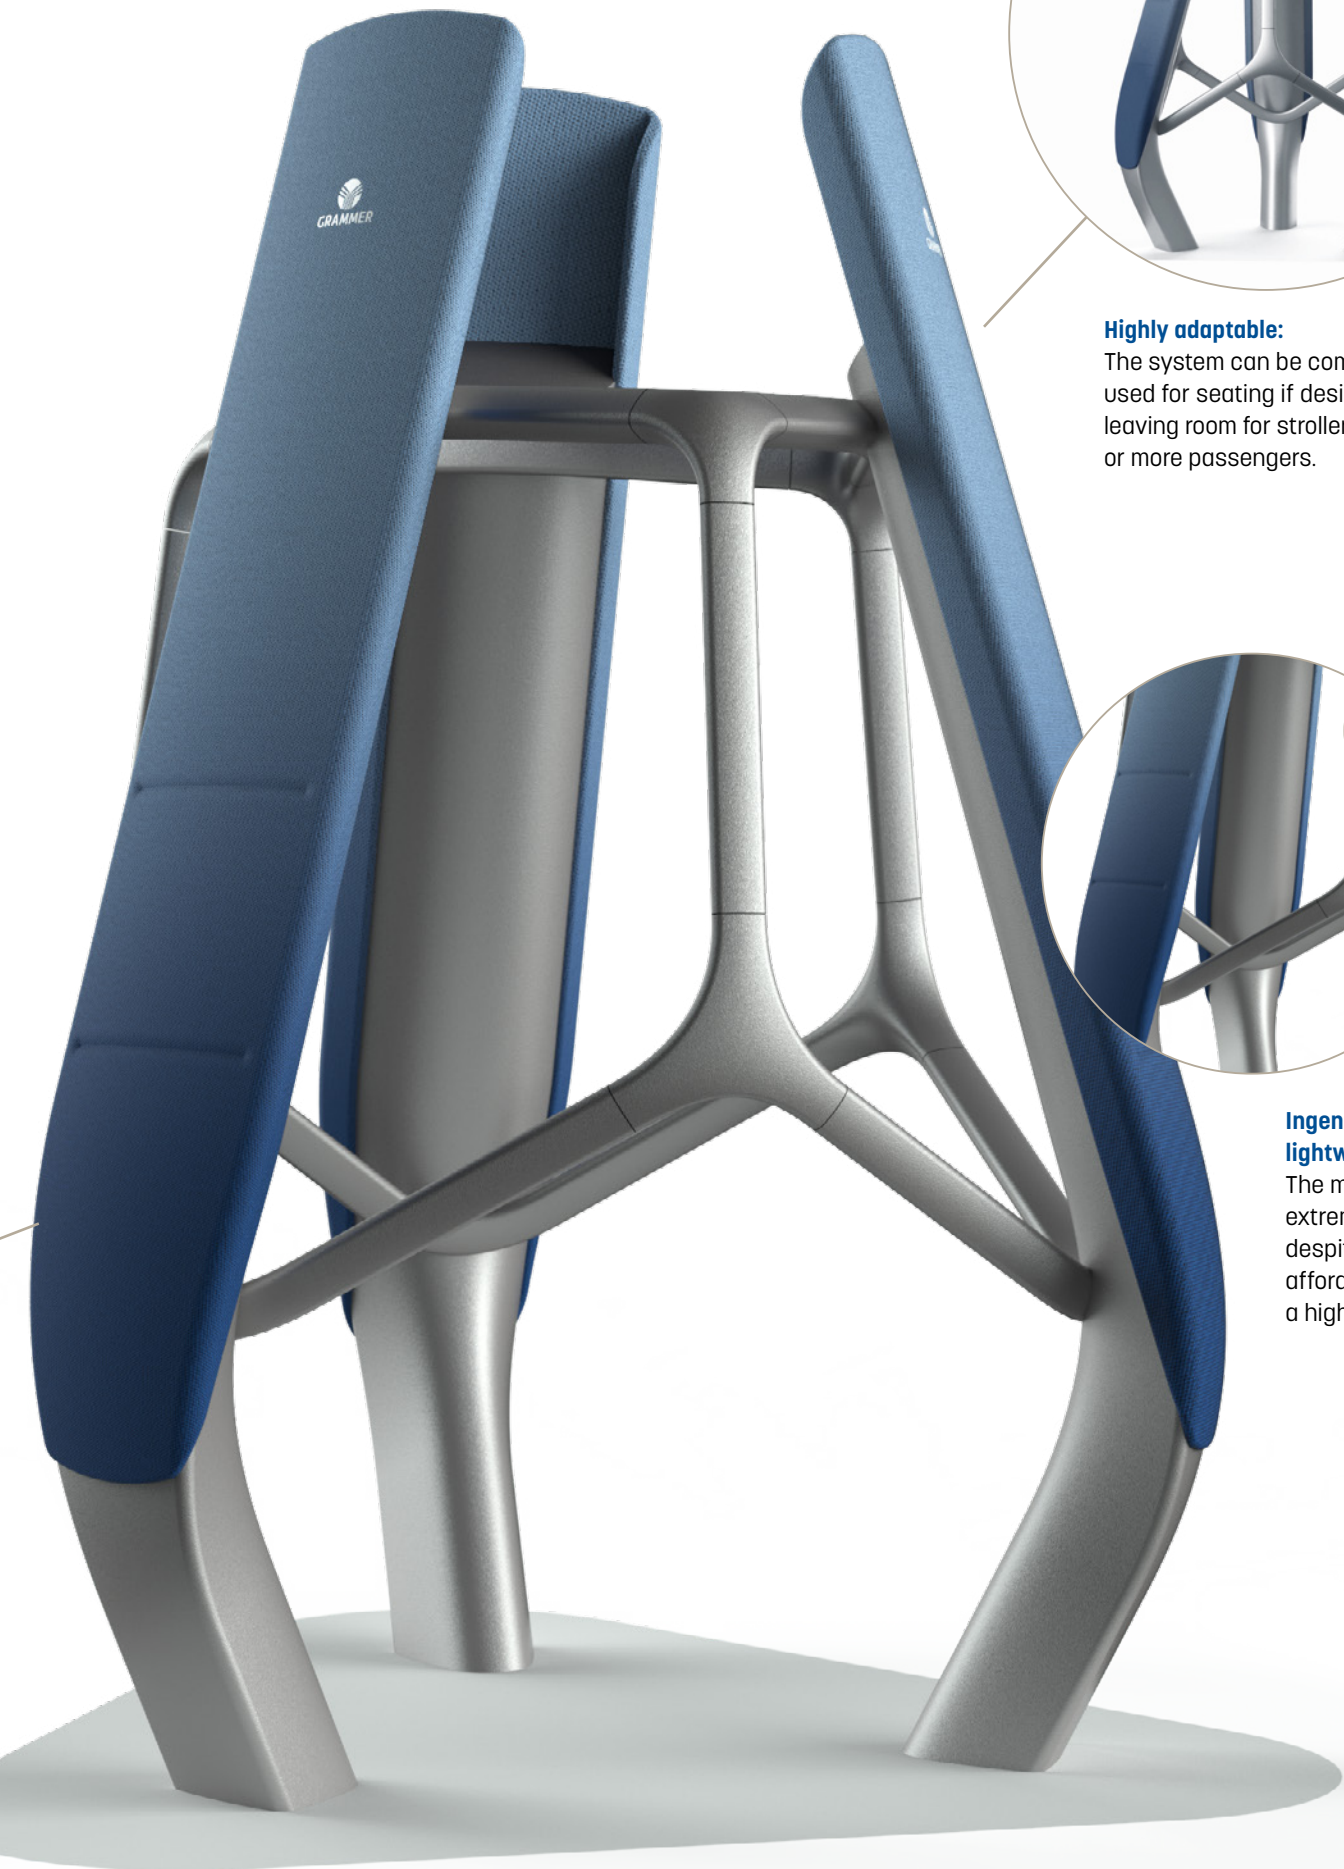

Highly adaptable:

The system can be comfortably used for seating if desired, while leaving room for strollers, bicycles ... or more passengers.

**Ingenious
lightweight build:**

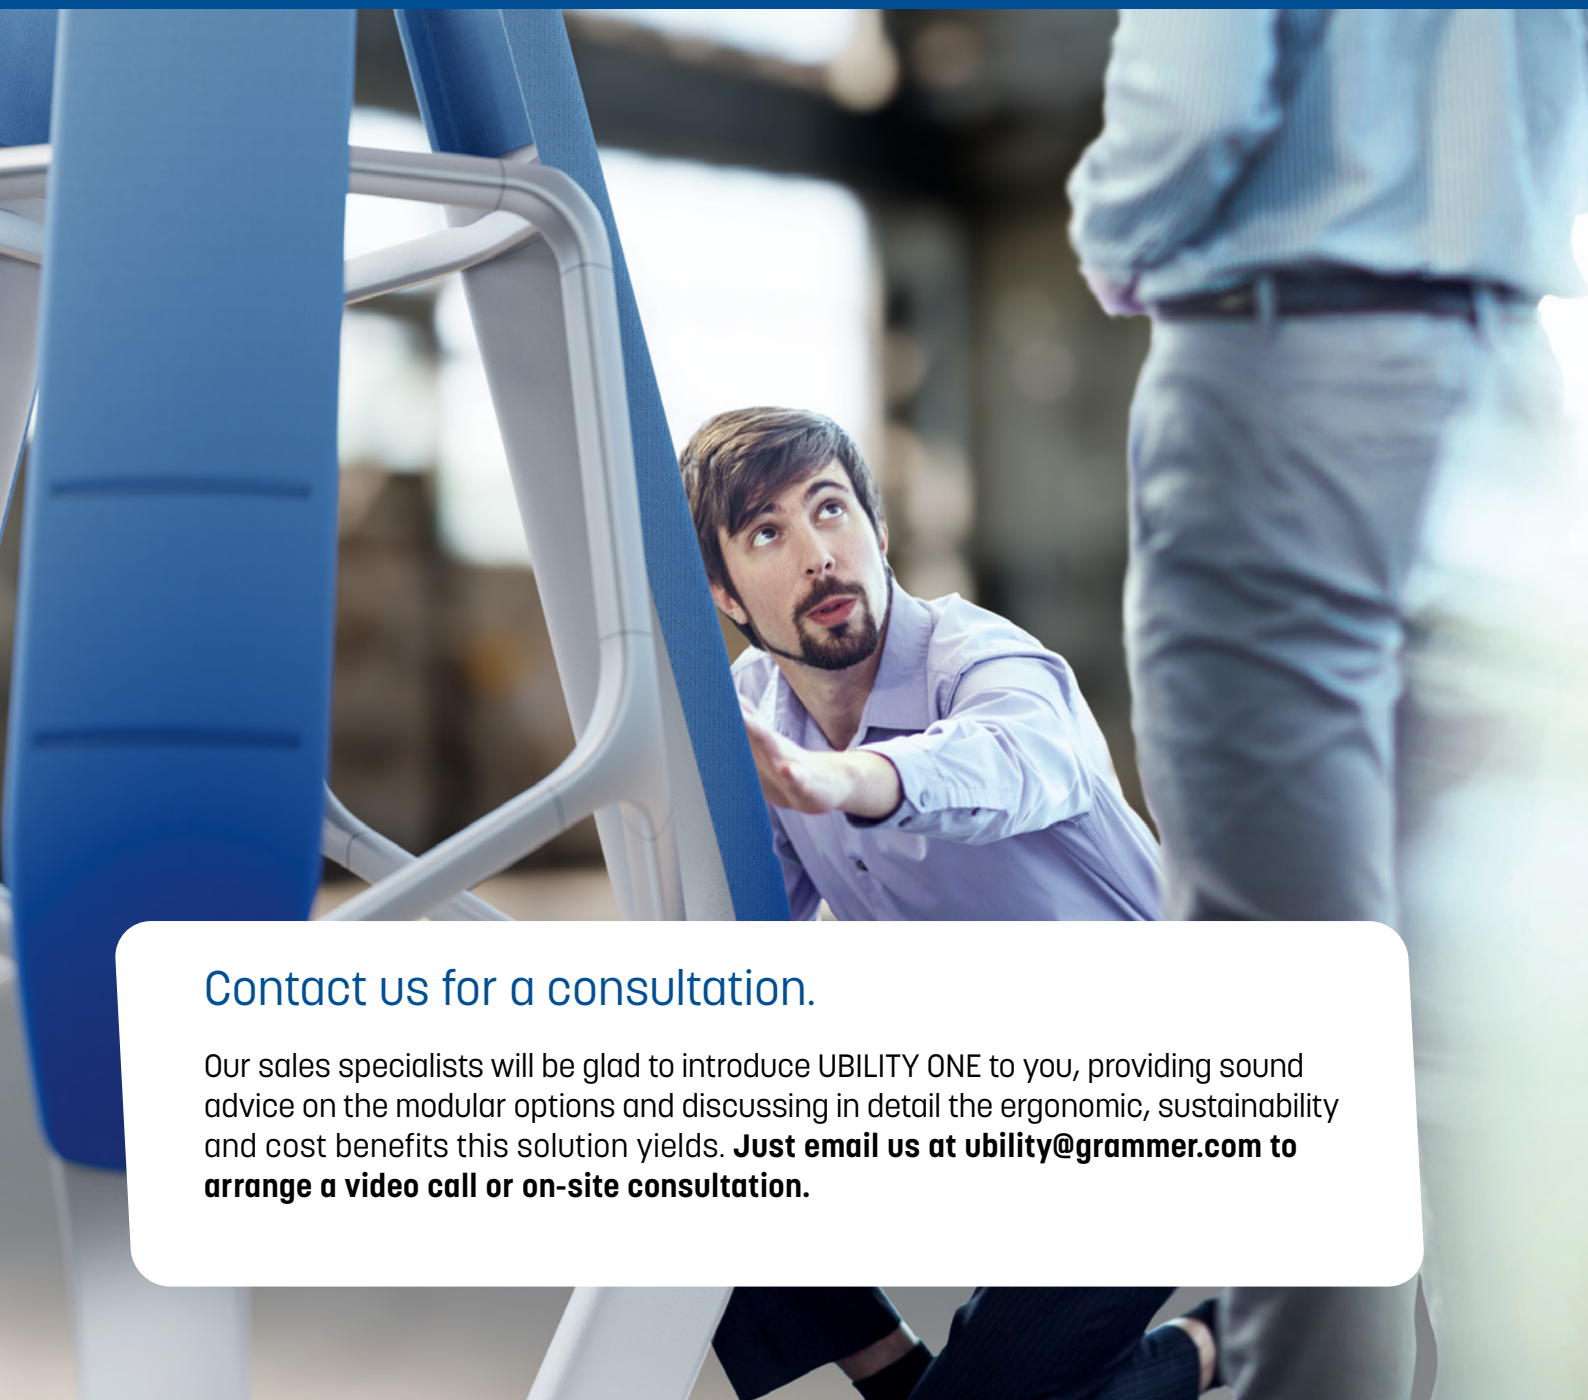

The module is extremely robust despite its low weight, affording passengers a high level of safety.
