

## Grammer showcasing seating innovations at bauma China

- *Seating comfort in a class of its own for construction machinery and trucks*
- *Ergonomics and comfort boosting efficiency*
- *Strong position in APAC*

**Ursensollen, November 24, 2020** – Grammer will once again be present at bauma China from November 24 to 27 in Shanghai with its comprehensive and market-leading range of seating solutions. With more than 2,800 exhibitors, bauma China will be demonstrating its undisputed reputation as the leading international trade fair in China and the rest of Asia for all areas of the construction machinery industry this year. As a market leader in seating systems for commercial vehicles, Grammer offers innovative high-tech solutions for optimum suspension and seating comfort, even in extreme work situations. Comfortable, ergonomically designed driver's seats are an essential factor in modern construction machinery. As a human/machine interface, they enable concentrated and fatigue-free operation even after extended use. Consequently, the often expensive machines with their high operating costs can be put to significantly better and more efficient use.

“We offer our customers innovative solutions for numerous applications in the construction sector. With a total of seven production and two development sites in China for the Automotive and Commercial Vehicles divisions, Grammer has an excellent base. This enables us to support our customers in China and the APAC region by offering them customer specific solutions, ensuring that we can achieve our growth targets in Asia,” says Thorsten Seehars, Chief Executive Officer of Grammer AG.

The special highlights at the booth include the MSG97EL/741 and the MSG95EL/742 with a multi-functional armrest. These two high-end driver's seats feature a new design with optimized side contour adjustment and an efficient climate-control system, offering maximum comfort and ergonomics. In addition, Grammer is also showcasing its wide range of seats for construction machinery in all size classes as well as its current range for trucks. With their numerous comfort features, the ergonomic air-suspension seats of the MSG 90.6 series are of particular importance for the Chinese market.
