

Grammer center console is a bridge to the digital cockpit

- *Center console with display carrier as defining style element*
- *Extensive development expertise creates lightweight and efficient design*
- *Production sites close to customers for short distances and high flexibility*

Grammer AG, November 23, 2023 – Key eye-catcher: As bridge between the rear and the digitalized cockpit, the Grammer center console impresses with features such as a butterfly lid as a high-quality storage compartment cover with a trim that matches the interior, a center section including a generous storage compartment and USB socket, as well as a carrier for the infotainment screen in the interior design of the new Mercedes-Benz GLC.

“The design of the center console impressively demonstrates how we combine the requirements of modern vehicle interiors,” explains Jens Öhlenschläger, CEO of Grammer AG. “In addition to a strong design that fits perfectly into the interior concept, a high level of functionality is also required. Our many years of development experience have helped us to translate the customer’s wishes into a component that can be produced in large volumes.” The center console in the Mercedes-Benz model is not only a real eye-catcher, but also offers numerous storage areas. One highlight is the display carrier, which gives the driver and front passenger the best possible access to the infotainment system. Grammer has developed a stable solution that is both lightweight and efficient. A task that Grammer’s experienced engineers have solved impressively.

In addition to this strong development expertise, Grammer impresses with its international production sites for short distances. Grammer produces the center console near the vehicle’s production site in Bremen, thus ensuring just-in-time delivery.
